## Το Σπίτι που Γελάει

### Announcement

Varkiza, 25 May 2019

Dear Parents,

The House Full of Laughter is innovating with a new education program in **pre-kindergarten** and **kindergarten** from September 2019.

A) Following the **British Early Years Foundation Stage** (EYFS) program the House Full of Laughter implements the **observational assessment**, an important tool for children's education. The educator records the important events in children's school life alongside photographical material and analyses them to plan the most appropriate activities for the child's development.

Each child will have their own **Learning Journey record**, where the parent will have access any time to supervise the progress of their children.

B) Activities of this age include the training program of the Technokids, **STEAM (Science, Technology, Engineering, Arts and Mathematics)**. Children, using specialised software for this age on personal computers, discover the fields of Science, Technology, Engineering, Arts and Mathematics.

On behalf of the management
